Information

This screen lays out the current implementation of the Voucher Search. This screen shows the search form open by default. After a successful search is performed, the search form will collapse, the summary will display, and the list will appear beneath the form area.

Callouts

- 1 Known vouchers may be opened directly by entering a unique identifier.
- 2 The Search form may be opened and closed, and is open by default. Changes will commit only when the "Search" button is pressed.
- 3 Once the search is collapsed after a successful search, the summary will display for anything limiting the results.
- 4 The successful results will appear beneath the collapsed form after the data is returned.
- 5 A date range chosen from the select box will report the range beside the control
- 6 Choosing to set a custom date range will enable fields to set start and end dates.
- 7 A visually distinct function to clear the form, and reset the contents to their defaults. This will also clear all search results on the page.
